Nissan: 2016~ Titan (Heavy Duty - Factory Wheel) **Infiniti:** 2011-13 QX56, QX80

3. KIT CONTENTS:

Item	Qty.	Description
A	4	Wheel Lock
B	1	Key
C	1	Instruction Card
D	1	ID Card
E	1	Order Form with Envelope
F	1	Plastic Wire Tie

4. TOOLS REQUIRED:

Wire Brush, Vehicle Lug Wrench (if equipped), Torque Wrench, 21mm Hex Socket

5. Installation:

1. Remove one lug nut from each wheel. If studs are dirty, clean with a wire brush prior to installing locks.
2. By hand, install a wheel lock on each wheel.
3. Take the key supplied in the wheel lock set and place it on top of the wheel lock, turning until the key and wheel lock patterns engage. Please the lug wrench (or torque wrench and socket) on the key and while applying inward pressure on the key tighten the wheel lock. Use a torque wrench and socket to tighten the wheel lock to the recommended torque specification found in the vehicle owners manual.

CAUTION

1) Use of an impact wrench may cause permanent damage to the wheel lock and key. If in doubt about the wheel lock application, ask your dealer for assistance.

WARNING

- 1) Do not use oil or grease on the wheel stud or wheel lock. This could cause the wheel lock to become loose.
- 2) Retighten the wheel lock when the vehicle has been driven for 1,000 km (600 miles).

6) Key Attachment to Lug Wrench (if equipped):

1) Attach the wheel lock key to the vehicle lug wrench using the plastic fastener supplied in the wheel lock kit. Pull cable tight with pliers and cut excess off with scissors or the side cutter of the pliers (refer to Diagram A.)

2) Return lug wrench to vehicle.

7) Removal:

1) Use the special key and your lug wrench (if equipped). If there is no lug wrench use a torque wrench and socket. Place the key on top of the wheel lock and turn until the patterns engage. Place the lug wrench or torque wrench and socket on top of the key, and while applying inward pressure on the key, loosen the wheel lock.

2) To reinstall, follow step 5 above.
